✓ For a given dependency, we could possibly have one mock per test, as necessary, with limited behavior or state to ensure the code passes the test on hand. *2/2

- ☒ true
- ☐ false

✓ When a test passes as soon as we write it: * 2/2

- ☒ examine to ensure the test passed for the right reasons
- ☐ means the code is in great shape already
- ☐ it tells we're that awesome in writing tests
- ☒ it may mean the test is possibly wrong

✓ We should write unit tests on mocks to ensure they're implemented correctly. *2/2

- ☐ of course
- ☒ oh, no

✓ To keep all the tests maintainable we should create only one mock for each dependency. *2/2

- ☐ true
- ☒ false

✓ There will be as many mocks as the number of tests we create. * 2/2

- ☐ true
- ☒ false
